LIBERACIÓN SISTRA: PLUGIN AUTENTICACIÓN EXPLÍCITA

INDEX

1. GOAL	4
2. SUBCLASS	5
3. PLUG-IN INTERFACE.....	6

LIBERACIÓN SISTRA: PLUGIN AUTENTICACIÓN EXPLÍCITA

1. Goal

The purpose of this document is to define actions to perform for allowing that SISTRA platform can use a user/password given by organization in order to authenticate communications with other systems (domains calls, etc.)

LIBERACIÓN SISTRA: PLUGIN AUTENTICACIÓN EXPLÍCITA

2. Subclass

Platform will allow to set authentication mechanism in configuration of access to certain elements (fi a domain):

- implicit authentication: EJB container is responsible for transferring authentication (in case of web services interface, authentication won't be transferred with the exception of automated processes).
- explicit authentication with user/password: specified user/password is used to authenticate communication.
- organization explicit authentication: explicit authentication plug-in from organization is used to obtain user/password for authenticating communication.

If organization won't use explicit authentication mechanism, it isn't necessary to implement this plug-in.

LIBERACIÓN SISTRA: PLUGIN AUTENTICACIÓN EXPLÍCITA

3. Plug-in interface

Communication interface between SISTRA and explicit authentication plug-in is as follows:

Method	Description	Parameters	Result
getAutenticacionInfo	It gets information to authenticate	Tipo elemento: T (Process) / D (Domain) Id elemento	AutenticacionExplicitaInfo: it returns user and password

For more information consult javadoc.
